HYROTRADER COMPLETE SETUP GUIDE

From creating your account to placing your first funded trade. Everything you need to get set up and avoid the mistakes that fail accounts.

5 Steps to Get Funded	10 Min Trading Days Required	5min SL Deadline After Entry
---------------------------------	--	--

@bitcoin.daily

What Is HyroTrader?

And why it's different from every other prop firm.

HyroTrader is a crypto-native proprietary trading firm. You pay a one-time challenge fee, prove your edge through an evaluation, and trade their capital. You keep 70-90% of every dollar you make. Your personal savings are never at risk.

The key differentiator:

Most prop firms run crypto on simulated price feeds -- internal platforms with fake wicks and manufactured liquidity. HyroTrader connects directly to **real Bybit order books** via API. The price you see is the price every Bybit user sees. No synthetic fills. No surprises when you go funded.

Feature	HyroTrader
Execution	Real Bybit order books via API
Platforms	Bybit (API) + Cleo (Binance data, US traders)
Account sizes	\$5K / \$10K / \$25K / \$50K / \$100K / \$200K
Profit split	70% starting, scales to 90% over time
Payout speed	12-48 hours in USDT or USDC
Payout minimum	\$100 profit
Challenge fee	One-time, refunded with first payout
Time limit	None
Scaling ceiling	\$1,000,000
Free trial	10-day free trial, up to \$100K

1

Create Your HyroTrader Account

Start with the free 10-day trial -- no payment, no commitment. It runs under the exact same rules as a paid challenge, so you can test your strategy and learn the platform before spending anything.

How to sign up:

1	Go to hyrotrader.com and click Get Started
2	Enter your email and create a password
3	Select your challenge type (1-Step recommended) and account size
4	Choose your platform: Bybit or Cleo (US traders use Cleo)
5	Pay via credit card or crypto (BTC, ETH, USDT, USDC, and more)
6	Apply discount code <code>btcdaily</code> for 10% off at checkout

Which account size to pick:

Account	1-Step Fee	10% Target	Best For
\$10,000	\$199	\$1,000	Starting out
\$25,000	\$399	\$2,500	Experienced traders
\$50,000	\$699	\$5,000	Solid track record
\$100,000	\$999	\$10,000	Strong consistent edge
\$200,000	\$1,399	\$20,000	Max capital from day one

All fees are one-time and fully refunded with your first funded payout. If you pass, the evaluation costs you nothing.

2

Connect Your Bybit API

This is the step that trips people up. Follow it exactly. A wrong API setup means your trades won't connect to HyroTrader's dashboard and your challenge won't be tracked.

If you are a US trader, skip this step and go to Step 3 (Cleo setup) instead.

Important: Use the Bybit DEMO account, not your live account.

HyroTrader challenges run on Bybit's demo environment. You must generate the API key from your **demo account**, not your real funded Bybit account. Connecting your live account will not work.

Step-by-step API setup:

S t e p	Action
1	Log in to Bybit and switch to the Demo Trading environment (top menu)
2	Go to your profile icon (top right) and select API
3	Click Create New Key
4	Set permissions: Read/Write, Unified, and Assets -- all three required
5	Copy BOTH the API Key and Secret Key using the Copy button -- do not type manually
6	Paste both keys into your HyroTrader dashboard where prompted
7	Confirm there are no open trades or limit orders before connecting

3

Cleo Setup -- US Traders

Because Bybit restricts US access, HyroTrader offers Cleo as an alternative platform. Cleo runs on Binance's data feed and gives US traders access to the same rules, evaluation structure, and funded account path. If you are outside the US and using Bybit, skip this step.

Feature	Cleo Details
Data feed	Binance live market data
Account needed	No Bybit account required
Setup	Automatic -- no API key generation needed
API trading	Not available on Cleo
Hedging	Not supported on Cleo
Same rules?	Yes -- identical evaluation rules to Bybit path
Low-cap rule	Applies -- same as Bybit (max 5% in <\$100M mcap)

How to get started on Cleo:

1	Select Cleo as your platform during challenge signup on HyroTrader
2	Your challenge account is created automatically -- no API setup
3	Log into the Cleo platform using your HyroTrader credentials
4	All trading, drawdown tracking, and rule monitoring works the same as Bybit

Tip for US traders: You can also use a Bybit DEMO account on Cleo for extra charting tools. Check HyroTrader support for the latest Cleo feature updates.

4

Know the Rules Before You Trade

HyroTrader monitors every rule in real time. There are no manual reviews or grace periods for most violations. Read this page before opening a single position.

THE STOP-LOSS RULE -- THE ONE THAT FAILS MOST ACCOUNTS

A stop-loss is **mandatory on every trade** and must be set within **5 minutes of entry** using Bybit's TP/SL tool specifically. Conditional orders do not count.

Rule	Detail
Time limit	Set SL within 5 minutes of entering the trade
Tool required	Bybit TP/SL tool only -- conditional orders not valid
Adjust rule	Edit your SL, never cancel it. Cancel = instant breach
Max risk/trade	3% of initial account balance per trade
First violation	One soft breach allowed -- 1 hour to fix before fail
Second violation	Immediate account failure, no warning

ALL RULES AT A GLANCE

Rule	1-Step	Funded Account
Profit target	10%	No target
Max drawdown	6%	10%
Daily drawdown	5%	4%
Min trading days	10	None
Max risk per trade	3%	3%
Max exposure	25%	25%
Stop-loss required	Yes	Yes
Profit dist. rule	Yes	No
Time limit	None	None

Weekend holds	Allowed	Allowed
---------------	---------	---------

What Will Fail Your Account

Know these before you place a single trade.

Violation	What Happens
No SL set within 5 min	Soft breach (once). Second time = instant fail
Cancel SL without closing	Treated as no SL -- same breach process
Daily drawdown exceeded	Account failed immediately
Max drawdown exceeded	Account failed immediately
Low-cap altcoin >5%	Account not funded or restricted
Martingale strategy	Strictly prohibited -- account terminated
Cross-account hedging	Prohibited -- accounts terminated
Delete/modify API key	Breaks connection, may fail challenge
Trading USDC pairs/options	Prohibited on Bybit challenges
Copy trading others	Not allowed during evaluation phase
Profit dist. rule breach	One day >40% of total profit -- warning then review

The profit distribution rule explained:

During the evaluation, no single trading day can account for more than **40% of your total profit**. This exists to prevent one lucky day from carrying an otherwise undisciplined account. Consistency is the point. If you hit 10% profit and one day represents more than 4%, you will need to continue trading until the ratio normalises. This rule does not apply to funded accounts.

The low-cap altcoin rule:

Any coin with a market cap below \$100M or 24-hour volume below \$5M is classified as low-cap. Your total exposure to all low-cap altcoins combined cannot exceed **5% of your initial balance** at any time. This applies to both Bybit and Cleo challenges.

5

Pass the Challenge and Get Funded

The 1-Step challenge requires you to hit a 10% profit target across a minimum of 10 trading days while staying within all risk rules. No time limit. No rush.

What counts as a valid trading day:

A trading day is any day you open at least one position. Each qualifying trade must have a minimum size of **5% of your initial balance** and the trade's PnL must move at least **1% in either direction**. If a trade is held over multiple days, only the day it was opened counts.

Strategy for passing cleanly:

DO	Set your SL the moment you enter -- before anything else
DO	Spread your trading across multiple days, not one big day
DO	Keep any single day under 40% of your total profit
DO	Risk 1% per trade consistently -- the math works
DO	Monitor your daily drawdown before each session
DO NOT	Chase the 10% target in 1-2 days with oversized positions
DO NOT	Ever cancel a stop-loss -- always edit it instead
DO NOT	Trade low-cap altcoins beyond 5% of your balance
DO NOT	Delete or regenerate your API key mid-challenge

After hitting the 10% target:

1	HyroTrader will review your results -- you may not be notified automatically
2	Complete KYC verification on your HyroTrader profile
3	Sign the funded trader contract and submit the funded trader form
4	Start trading your funded account -- split begins at 70%
5	Challenge fee is refunded with your first payout

Payouts and Scaling

How the money works once you're funded.

How to request a payout:

1	Wait at least 1 calendar day after your first funded trade
2	Reach the \$100 minimum profit threshold
3	Close all open positions before requesting
4	Submit payout request through your HyroTrader dashboard
5	Receive USDT or USDC within 12-48 hours. No withdrawal fees.

Profit split scaling path:

Timeline	Split	Requirement
Month 0-4	70%	Start funded trading
Month 4-8	75%	20% net profit + 2 payouts in period
Month 8-12	80%	20% net profit + 2 payouts in period
Month 12-16	85%	20% net profit + 2 payouts in period
Month 16+	90%	20% net profit + 2 payouts in period

Capital scaling:

Every 4 months of funded trading, you can request a scale-up of your capital. The requirement is 20% net profit over that period (roughly 5% per month average) and at least 2 completed payouts. No cap on how many times you can scale. The path from \$200K to \$1M is achievable within 12 months of consistent performance.

\$100 Min payout threshold	12-48h Payout processing	\$1M Max scaling cap
--------------------------------------	------------------------------------	--------------------------------

Quick Reference Cheat Sheet

Everything important on one page. Save this.

CHALLENGE RULES (1-STEP)	NUMBER
Profit target	10%
Max drawdown	6%
Daily drawdown	5%
Max risk per trade	3%
Max total exposure	25%
Min trading days	10
SL deadline	5 min
Profit dist. limit	40% per day
Low-cap altcoin limit	5%
Time limit	None

PAYOUT INFO	DETAIL
Earliest request	1 calendar day after first funded trade
Minimum profit	\$100
Processing time	12-48 hours
Currency	USDT or USDC only
Fees	None
Challenge fee back	Refunded with first payout

PROHIBITED (instant fail / restriction)

Cancel stop-loss without closing position

No SL set more than once (second time = fail)

Exceed daily or max drawdown
Martingale strategy
Cross-account hedging
Delete or modify API key
Copy trading during evaluation
Trading options or USDC pairs on Bybit
